

ID MOS Digital I.P. SHORTFORM

IM199: Card Controller

PRODUCT DESCRIPTION

The CARD controller is designed to interface a microcontroller and the wireless Data Transmitter/Receiver TH 9025.1. The Controller shifts out the data written into its data registers and read the 5-bit data from TH 9025.1 redirecting it to the microcontroller core..

FEATURES

- Interface with wireless Data Transmitter/Receiver TH 9025.1
- 8-bit data bus
- Data encoded through Hamming and Manchester coders

TYPICAL APPLICATIONS

- Wireless Data Transmitter/Receiver TH 9025.1 interface

BLOCK DESCRIPTION
